# **QM 2225** 2 part moldmaking material

QM 2225 is a two-component, room temperature, condensation
cure, silicone material. The cured rubber has excellent
mechanical properties and good shelf-life stability. This material
is an excellent choice for the molding of intricate patterns, skin
molding and applications where high durometer, dimensional

molding and applications where high durometer, dimensional stability and extremely tough rubber are required. A variety of catalysts are offered with this material.

## **Key Features**

Description

- Low specific gravity
- High tear strength
- Low viscosity and long work life
  Fast de-mold time and excellent flowability

Statues, technical articles, prototypes, furniture, picture frames, PU, epoxy and polyester casting resins, GFRC pre-cast

#### **Use and Cure Information**

## **CURE CHARACTERISTICS**

The standard catalyst for QM 2225 is Moldmaster

Purple catalyzed at a 10:1 ratio (base:catalyst) by weight. Faster cure can be obtained using DBT or Moldmaster Red, Moldmaster Blue or a higher level of Moldmaster Purple. However, rapid cure of condensation cure moldmaking materials can often result in a small sacrifice of physical properties or an increase in hardness. The curing process begins as soon as the catalyst is mixed with the base. The material will cure as described in the data above under normal temperature (25°C) and humidity conditions (50% RH). Because this system is sensitive to heat and humidity, a change in cure speed may be observed if one or both of these variables are altered. A large difference in temperature (+/- 5°C)

Property	<b>Test Method</b>	Value

### **Cured Product**

Color **Blue** 1.09 g/cm3 BS ISO 2781 Density Elongation at Break **ISO 37** 500 % ASTM D 2240-Hardness Shore A 25 95

Linear Shrinkage (%) <0.25 % Tear Resistance (N/mm) BS ISO 34-1 24.3 N/mm / 139 ppi

Tensile Strength **ISO 37** 4.14 N/mm2 / 600 psi

# Storage

Max Storage Temperature 38 °C / 100 °F Shelf Life 12 mths

or humidity (> 60% – 70%) may alter the cure profile of the material. In addition, if the product is to be used with aggressive resins such as high styrene polyester resins, it is recommended that the rubber be allowed to cure for 48 hours.

All condensation cure catalysts should be thoroughly mixed prior to catalyzation. CHT recommends that the catalyzed material be tested on a small area of the mold prior to use. QM 2225 should be thoroughly mixed with the catalyst of choice using a 10:1 ratio (base:catalyst) by weight. Shake the catalyst well before use. Material should be mixed in a clean, compatible metal or plastic container. The volume of the container should be 3 - 4 times the volume of the material to be mixed. This allows for expansion of the siloxane material during de-aeration. Mix thoroughly by hand or with mixing equipment while minimizing air entrapment until a homogeneous mixture is obtained. This will occur when the material takes on a uniform color with no visible striations.

### **DE-AERATION**

Air trapped during mixing should be removed by vacuum at 29 inches of mercury. During the process, the material will expand, and intermittent evacuation may be required. Typically, after releasing the vacuum 2 - 3 times, the mass will collapse on itself at which time the vacuum should be left on for an additional 2 - 4 minutes.

UNCATALYZED					
PROPERTY	QM2225	MM PURPLE	MM GREEN	MM BLUE	MM RED

#### Storage

See product label and/or CoA for specific "Use By Date". Product should be stored in its original, unopened container in an environment that does not exceed 38°C (100°F). Storage beyond the date specified on the label does not necessarily mean that the product is no longer usable. In this case, the properties required for the intended use should be checked for quality assurance reasons
