**Introduction**

This is a two-component low tear room temperature condensation cure silicone system. The cured rubber is suitable for the mould making of patterns with fine details, where some dimensional stability is required. Low tear silicone moulding rubbers are cost effective for the production of moulds only requiring a few impressions. They find uses in the reproduction of plane surface objects.

**Key Features**

- Easy demoulding
- Easily degassed
- Low viscosity
- Fine detail pick up

**Use and Cure Information**

The curing process starts as soon as the catalyst is added. Under normal conditions of temperature and humidity typical curing characteristics are described below. If the product is to be used in contact with aggressive chemicals, such as high styrene polyester resins or epoxies, it is recommended that the rubber be allowed to cure for 48 hours before use.

Pour the catalysed rubber into the mould from one point, ensuring air is not entrapped. Allow the rubber to cure before removing from the mould. To allow the rubber to achieve its maximum physical properties and chemical resistance leave the partially cured rubber to age at room temperature for at least a further 12 hours.

**How to Use**

Charge the base rubber into a clean plastic or metal container, approximately 3-4 times its volume.

Add standard catalyst in the proportion of 5 parts by weight of catalyst to 100 parts by weight of the rubber base. Mix thoroughly, slowly at first to avoid splashing and taking care to avoid excessive air entrapment. After catalysis any entrapped air may be removed by intermittent evacuation for several minutes. The use of a sufficiently large container permits degassing without overflow.

**Catalysts**

Use the following catalyst available from ACC Silicones

<table>
<thead>
<tr>
<th>Code</th>
<th>Colour</th>
<th>Pot Life</th>
<th>De-Mould</th>
</tr>
</thead>
<tbody>
<tr>
<td>MM CAT L5 NT</td>
<td>Clear</td>
<td>&gt;60 mins</td>
<td>&lt;24 hrs</td>
</tr>
</tbody>
</table>

**Health and Safety**

Safety Data Sheets available on request.

**Packaging**

CHT Moulding Rubbers are available in a variety packaging including bulk containers. Please contact our sales department for more information.
