# **TECHNICAL DATA SHEET**

## ALPA-LSR 160201 Preliminary datasheet

| Description   | Property                     | Test Method          | Value               |
|---|------------------------------|----------------------|---------------------|
| This is a 2-part addition cure silicone elastomer system for Liquid   | Uncured Product              |                      |                     |
| Injection Moulding (LSR). After mixing parts 'A' and 'B' in the   | Color A                      |                      | translucent         |
| correct proportions, the system will cure at elevated   | Color B                      |                      | translucent         |
| temperatures, usually in the range of 100 °C to 180 °C. The cycle   | Cure Type                    |                      | Addition            |
| time depends mainly on the temperature and the shape of the mould. The cured rubber exhibits excellent physical and electrical        | De-mould Time / Full Cure at |                      |                     |
| properties.   | 23°C/73°F                    |                      | > 48 hrs            |
| Key Features  | Density A                    | DIN 53 479           | 1.13                |
| <ul> <li>Product is suitable for Liquid Injection Moulding process</li> </ul>   | Density B                    | DIN 53 479           | 1.13                |
| Curing speed can be accelerated by temperature  | Mix Ratio By Weight          |                      | 1:1                 |
| <ul> <li>Very good mechanical properties</li> <li>Easy demoulding</li> </ul>  | Viscosity A                  | Brookfield HBTD      | 600.000 cP          |
| Use and Cure Information  | Viscosity B                  | Brookfield HBTD      | 600.000 cP          |
| IMPORTANT:  | Viscosity Mixed              | Brookfield HBTD      | 600.000 cP          |
| The 'A' part of product   |                              |                      |                     |
| contains the platinum catalyst; great care should be taken when   | Cured Product                |                      |                     |
| using automatic dispensing equipment. Please ensure that it is  | Color                        |                      | Translucent         |
| not contaminated by residual hydride containing rubber in the   | Compression Set %            | BS ISO 815-1         | - %                 |
| dispensing equipment, as curing will result. If in doubt, it's  | Density                      | DIN 53479            | 1.13 g/cm3          |
| advised to thoroughly purge the equipment with a suitable<br>hydrocarbon solvent or silicone fluid.                                   | Elongation at Break          | DIN 53 504, S 3 A    |                     |
| Mixing  | Hardness Shore A             | DIN 53 505           | 60                  |
| 5   | Linear Shrinkage (%)         |                      | < 0.1 %             |
| LSR silicone elastomers usually have a very high viscosity, which<br>is why automatic mixing and dosing equipment is recommended      | Max Working Temp             |                      | 200 °C / 392 °F     |
| for mixing!   | Min Working Temp             |                      | -40 °C / -40 °F     |
| Inhibition of Cure  | Tear Resistance (N/mm)       | ASTM D 624, Die<br>B | 30 N/mm / 171 ppi   |
| Great care must be taken when handling and mixing all addition<br>cured silicone elastomer systems, ensuring that all the mixing      | Tensile Strength             | -                    | 10 N/mm2 / 1450 psi |
| tools (vessels, tubes and mixer) are clean and constructed in   | Otomo un                     |                      |                     |
| materials which do not interfere with the curing mechanism. The   | Storage                      |                      |                     |
| cure of the rubber can be inhibited by the presence of compounds  | Max Storage Temperature      |                      | 30 °C / 86 °F       |
| of nitrogen, sulphur, phosphorus and arsenic; organotin catalysts<br>and PVC stabilizers; epoxy resin catalysts and even contact with | Shelf Life                   |                      | 12 mths             |

materials containing certain of these substances e.g. moulding clays, sulphur vulcanised rubbers, condensation cure silicone rubbers, onion and garlic.

#### **Curing Conditions**

LSR silicone elastomers do crosslink extremely slowly at room temperature. Temperatures greater than 100 °C are usually required to crosslink the materials in short time.

### Health & Safety

Safety Data Sheets available on request.

#### Packaging

CHT Moulding Rubbers are available in a variety packaging including bulk containers. Please contact our sales department for more information.
